# SAILTRACKER iPhone App Setup - Transponder 1.0

The iPhone app *Transponder* version 1.0 is now available for use with *SailTracker*. The app can be found on the App Store by searching for "*transponder*". The app is configured by entering the code for the racing event provided by Sailtracker.net or the race coordinator.
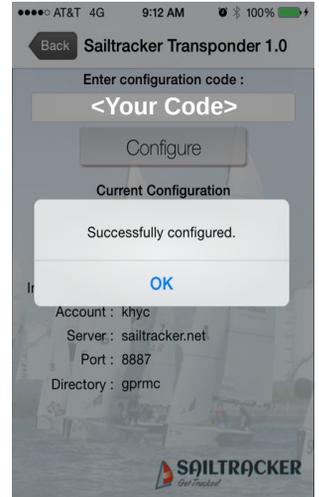

Get the App
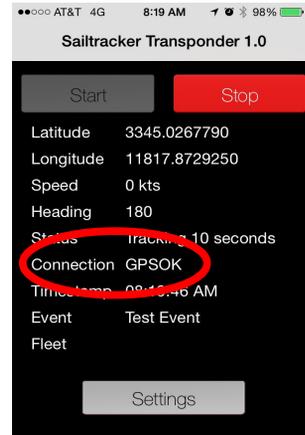

Click on "Settings"

Enter your code and press "Configure"

If all is correct you'll see "Successfully configured."

Return to the main screen and press "Start" when ready to track

Screen changes to black and tracking is working when Connection reads "GPS OK"

NOTE: It is highly recommended that the phone be connected to external power as GPS use decreases battery life substantially. It's also important to leave the app running on the screen (eg not minimized) - IOS turns off GPS apps running in the background after some time and this will stop tracking.

It's also recommended to place the phone in a location with the least amount of material between it and the sky (particularly metal objects) to optimize GPS signal.

If you have any questions or difficulties you can email: info@sailtracker.net or call 424.262.4725
